

ISO 20022 Data Source Schemes (DSS)

Updated on 10 January 2024 –

- 1. Addition of DSS for the Central securities depository of Saudi Arabia**

GenericIdentification used for Proprietary Indicator codes

1- DESCRIPTION

The ISO 20022 Data Source Scheme (DSS) is a mechanism that allows an institution or market organization to specify and use a proprietary code set that is not owned nor managed by ISO 20022, and that replaces a standard code set (either a specific ISO 20022 managed code set or another ISO standard code set, e.g. BICs or ISINs) in specific Message Components where the use of DSSs has been approved.

This document describes the DSS concept and registration process and list the DSSs already defined for use in ISO 20022 messages.

The DSS mechanism was first introduced in ISO 15022 – Securities – Scheme for messages.

The ISO 20022 DSS consists of the following parts:

- a mandatory 'data source issuer' that identifies the institution or organization issuing the proprietary code set (known as the 'data source issuer code' in the ISO 15022 DSS).
- an optional 'data source scheme name' that identifies the code set in case a single data source issuer issues more than one code set for the same business purpose, e.g., two code schemes for identification of parties (known as the 'data source issuer sub-code' in the ISO 15022 DSS).
- the actual code value.

The below table compares the DSS concepts in ISO 15022 and ISO 20022:

ISO 15022 concepts	ISO 20022 concepts
Context is specified by the generic field Example: Field 95R - Party	Context is specified by the lowest MessageComponent Example: GenericIdentification20 used for Proprietary Reason codes
Data source issuer code	Data source issuer
Data source issuer sub-code	Data source scheme name
Data Field that contains the code value	A separate MessageElement that contains the code value

Example of ISO 20022 DSS:

```

<Pty1>
  <Id>
<PrtryId>
  <Id>12345678</Id>
  <Issr>DAKV</Issr>
</PrtryId>
</Id>
</Pty1>
    
```

2- Registration Process

The approval of an ISO 20022 DSS requires agreement at two levels:

The Message Definition must include the possibility to use a DSS by including the appropriate structure in the required place. This is agreed by the SEG at the time the Message Definition is approved (initial submission or maintenance).

Specific code sets must be registered for use in the specific places where it has been agreed that a DSS can be used. This registration may be obtained at the time the Message Definition is approved or later - sometimes much later - namely any moment after the Message Definition has been approved.

Approval of the possibility to use DSSs in a new Message Definition

When a submitting organization is convinced of the need for a Data Source Scheme (existing or new DSS) in a specific context, it will include the appropriate structure in the candidate ISO 20022 messages. During the message evaluation, the assigned SEG will verify the business case to accept use of non-standard code sets. Similarly, if the need arises later to introduce the possibility to use a DSS in an existing message, a change request to update the structure of the Message Definition will be submitted to the relevant SEG for approval.

Registration of (additional) DSSs for use in existing Message Definitions

The RA maintains the list of all ISO 20022 Data Source Schemes as well as the specific Message Components in which they can be used.

If an institution or market organization requires the use of a new proprietary code set, it will send a request for registration of a new DSS to the RA, using the specific [DSS template](#). The RA will validate the request, assign a new DSS (issuer and scheme name(s)), inform the requestor and publish the new DSS information in an updated version of this document.

In case of conflict, the final decision will be taken by the RMG.

The list of current ISO 20022 DSSs is published below and gives the following information:

- which ISO 20022 Message Components support which DSSs
- the data source issuer information: description, country of issuer
- the data source scheme name(s), if any.

3- LIST OF DATA SOURCE SCHEMES

Requests for additional Data Source Schemes or use of existing Data Source Schemes in new Message Components must be submitted to the ISO 20022 Registration Authority using the official template for '[Request for ISO 20022 Data Source Scheme Registration](http://www.iso20022.org)' (www.iso20022.org).

In case of questions, please contact the ISO 20022 Registration Authority at iso20022ra@iso20022.org

- GenericIdentification used for Financial Instrument / Classification Type / Alternate Identification

Country of Issuer	Issuer	Scheme Name	Description
China	CCDC		China Central Depository & Clearing
Global	SMPG		Securities Market Practice Group
	REGL		Securities Market Practice Group
US	ISIT		ISITC
	DTCY		Depository Trust & Clearing Corp
ZA	GCSD		Granite Central Securities Depository
	STRA		Strate Limited

- GenericIdentification used for Financial Instrument / Long Number Identification (coupon, pool, lot...)

Country of Issuer	Issuer	Scheme Name	Description
CH	XSWX		Swiss Exchange
Global	SMPG		Securities Market Practice Group
	REGL		Securities Market Practice Group
GB	XVTX		Virt-x
ZA	GCSD		Granite Central Securities Depository
	STRA		Strate Limited

- GenericIdentification used for Proprietary Indicator codes (e.g., settlement parameters)

Country of Issuer	Issuer	Scheme Name	Description
AU	XASX		Australian Stock Exchange
BE	ECLR		Euroclear Bank
	NBBE		National Bank of Belgium
BE, FI, FR, GB, IE, NL, SE	EGSP		Euroclear UK & IE, Euroclear Bank, Euroclear BE, Euroclear FR, Euroclear NL, Euroclear FI, Euroclear SE
